SITQ-ft: Field Tests

SITQ conducts worldwide walking and driving tests for you in live networks, on the go in trains and with its own measurement vehicles. SITQ-fit is always used where there are networks – regardless whether in urban or rural areas.

SITQ conducts field tests with its own measurement equipment or in any configuration you would prefer. SITQ's test service also includes experienced measurement engineers and vehicles.

You will thus have flexible access to all field test components. All conceivable test configurations, test setups, hardware and software for tests, personnel and data preparation and analysis are customized specifically to your needs.

Thanks to our work in various standardization and research projects, we are always several steps ahead of commercial standards and services. We are thus testing the mobile applications, services and equipment of tomorrow for you today.

As a third-party tester we are the ideal partner for clarifying litigious issues. We are also available – competently and reliably – for independent review of your performance or for describing your competitors' services.

Main Features

- Aid during test setup
- Positioning test hardware, test software, test personnel and vehicles
- Worldwide walk and drive tests, including routing and travel planning
- Evaluation and documentation of the measurement results
- Analysis and portrayal of the results

Please contact us anytime regarding any questions you might have at sales@sitqsystems.com, letting us know whether we should reply by e-mail or telephone. One of our specialists will be in touch with you shortly
